ANNUAL REPORT

ST. LUKE'S HOSPITAL

OCT. 1, 1917 to
SEPT. 30, 1918

SAN FRANCISCO
- - CALIFORNIA - -

TO THE READER

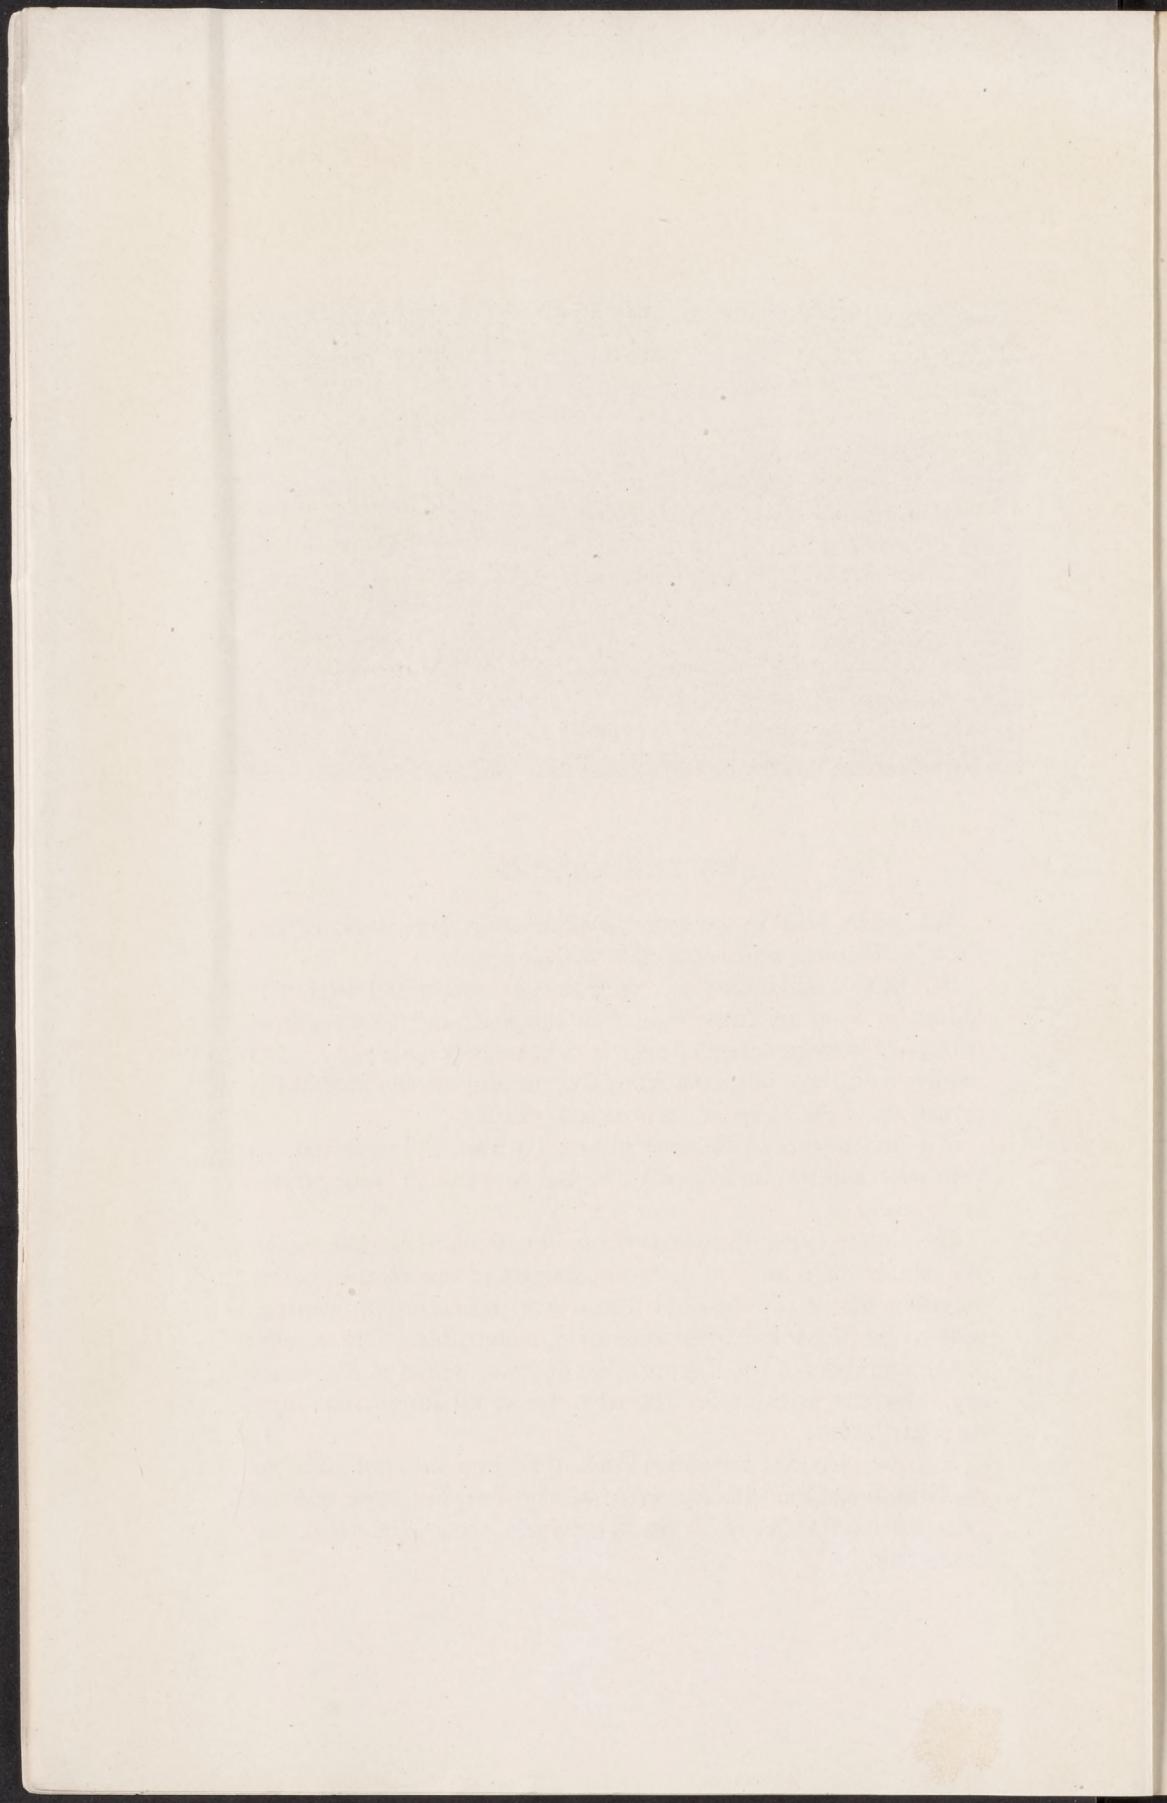

We want you to become familiar with the work of St. Luke's Hospital and especially with its aims.

St. Luke's Hospital is a corporation conducted with the object in view of furnishing free hospital and free medical care to deserving people, and is not a stock company. All money that may be made from the running of the hospital is returned in the form of care of free patients.

We invite you to become interested and, if interested, to visit the hospital, and we will be glad to welcome your advice or counsel.

We solicit subscriptions for any department of our work. We can arrange for you to assist directly in one of the special departments of the hospital if you will indicate your willingness to be identified with some of our charities. The names of the members of the Corporation and the Board of Directors are sufficient warrant for the wise use of all funds that may be contributed.

If your circumstances are such that you are not able to contribute to the charity work of the hospital, you can at least do us the favor of reading herein about the work we are doing.

ANNOUNCEMENT

St. Luke's is a general hospital, organized in 1871 under the auspices of the Episcopal Church; but no distinction is made between the various nationalities or creeds, its doors being open to all. Patients are allowed every facility for receiving the consolation of their own churches.

The hospital is situated on Valencia Street, near the junction of Mission Street, surrounded by well-kept grounds. It is free from the cold winds, fog and noise of other portions of the city, while at the same time easily accessible by the Valencia Street cars, which pass the door; also by the Mission Street line and the San Francisco and San Mateo electric cars, which pass within a block.

The corps of Attending Physicians and Surgeons is composed of men of known reputation and ability.

The members of the House Staff are also thoroughly efficient and attentive to their duties.

The Directors desire especially to bring St. Luke's Hospital to the notice of patients from a distance who may desire special treatment from surgeons or physicians in the city. Such persons can be accommodated as in a hotel, yet have the care and comfort of a home, and have their own physicians and nurses if desired.

St. Luke's Hospital cares for three classes of patients: In the first class are those who are able to pay the hospital charge for board, nursing and medicines, but are unable to pay for the services of a physician or surgeon; in such cases medical attendance is furnished by the hospital. The second class consists of private patients who select their own physicians or surgeons (who may be members of the attending staff or not), and who come to the hospital for the accommodations it affords. The third class is composed of those who are unable to pay anything to the hospital, and are admitted to the free beds.

All kinds of acute, curable and non-contagious diseases are treated in the hospital. Chronic and incurable complaints may be received and retained at discretion, but will not be permanently provided for. No patients are admitted suffer-

ing from any ailment that would occasion discomfort to other patients.

All reputable physicians and surgeons are invited to send their patients to the hospital, where they may attend them without fear of interference, but the hospital reserves the right to refuse cases from any physician or surgeon, for any reason that the hospital may deem sufficient.

Patients sent into the hospital by physicians not on the hospital staff cannot be treated by any member of the hospital staff except by special request from the doctor sending the patient into the hospital. The Board of Directors desire to extend every hospitality to the physicians of the community at large, and to assure them that every attention and courtesy from the resident executive and medical staff. Their orders will receive the same attention as those of the regularly appointed visiting staff. Many conveniences which add greatly to the efficacy of the hospital work are being installed from time to time, and a most satisfactory service is guaranteed to any physician or surgeon treating his patients here.

Complete records are kept of every patient from admission to discharge, to enable those physicians and surgeons who so desire to obtain ready reference to their cases.

The building is new and modern and the different departments have been well equipped with the latest and best apparatus for scientific treatment and for the comfort of the patients.

RATES

Detention Rooms.....	\$5.00	per day
Ward Beds.....	3.00	" "
2nd East (East side) Rooms.....	4.00	" "
" " (West side) "	5.00	" "
" Center Rooms.....	5.00	" "
Maternity Ward Beds.....	5.00	" "
" Rooms,.....	6.00	" "
3rd East (East side) Rooms.....	4.00	" "
" " (West side) "	5.00	" "
" Center "	6.00	" "
" West "	6.00	" "
4th Floor Rooms.....	7.00	" "

Rooms with Bath, \$1.00 Per Day Extra.

CHARGES

The above charges include board, lodging and the attention of a nurse on general duty and must be paid weekly in advance. Over-payments will be refunded, but when the service is for less than a week the daily rate will be charged, which is higher in proportion than the weekly rate.

The maternity rates include the delivery room and the babies' clothes and laundry while in the hospital.

The full rate is charged for a fraction of a day.

EXTRA CHARGES

Nurses—For graduate nurses the charge must be arranged between the patient and nurse directly. A graduate nurse charges \$30.00 per week and up. The Hospital charges \$1.00 per day for the board of graduate nurses.

Medicines and Dressings—Proprietary and compounded medicines, serums and excessively expensive medicines will be charged for. Excessive quantities of dressings or special dressings other than those ordinarily used in the Hospital will also be charged for.

X-Ray Work—Charges for X-Ray work vary from \$5.00 to \$30.00. The plates are the property of the Hospital. Duplicates or prints may be obtained.

Operating Room—The charge for the use of the operating room is from \$5.00 up, depending on the time consumed and the nature of the operation. An extra charge is made for gas anaesthesia and for special anaesthetists.

Hydrotherapeutic Treatments—Charges for treatments in the Hydrotherapeutic Department vary from \$1.00 to \$5.00 per treatment.

Pathological Examinations—Ordinary pathological examinations of blood, urine, sputum, feces, etc., will not be charged for. The following class of examinations, however, will be charged for—Histological examinations of tissues, Wasserman reaction, examinations requiring the inoculation of Guinea pigs, autogenous vaccines, etc.

Professional Fees—The professional fee must be arranged between the patient and the physician or surgeon and is not included in the Hospital charge.

VISITORS

Visiting Hours—Visitors are admitted to the wards between 2:00 and 5:00 p. m. and 7:00 and 9:00 p. m.

Relatives and friends will not be permitted to remain in the Hospital over night except by special permission from the Superintendent, when they will be assigned to a room and charged a special rate.

NOTES

Laundry—The personal laundry of the patients will not be done by the Hospital laundry.

Contagious Diseases—No case of a contagious nature will, under any circumstances, be admitted to the Hospital.

Gifts—Under the rules of the Hospital, no member of the House Staff, Nurse or Employee, is allowed to receive any compensation or gift from any patient, unless authorized to do so by the Executive Committee.

Valuables—The Hospital will not be responsible for money or valuables, unless deposited in the office.

ENDOWMENTS

St. Luke's has been most magnificently endowed with buildings and grounds but most sadly needs endowments for the free treatment of patients in order to accomplish more of the charity work for which the Hospital was founded and which it is called upon to do in ever increasing amounts. The sum of fifteen thousand dollars will endow a bed in the wards in perpetuity. Thirty thousand dollars endows a private room bed in perpetuity.

A careful estimate has been made, and the income from these endowments provide for the beds being occupied every day of the year.

Endowments of any amount will be gladly received and service will be rendered yearly to the extent of the earning capacity of the amount donated and in strict conformity with the wishes of the donors.

Each one thousand dollars at five per cent interest will provide \$50.00 worth of free care each year.

Patients occupying any endowed or partly endowed beds, do so with the understanding that they are to be treated by the members of the Visiting Staff of the Hospital.

REPORT OF THE PRESIDENT

*To the Members of the Corporation
of St. Luke's Hospital.*

GENTLEMEN: I shall not in this brief report give you any statistics regarding the work of the Hospital during the past year; they will all be found in the various annual reports of the departments submitted at this meeting.

The past year has presented more difficulties in the Hospital management than any previous year. The constantly rising prices of food, medicines, instruments and other supplies and the great difficulty, and sometimes impossibility, of getting things at all has created serious situations.

The death of Dr. Birtch, our resident physician, was a serious blow to our Institution. He had done splendid constructive work and had endeared himself to all who had affiliations with the Hospital.

The loss of our Staff members, Nurses and Internes, owing to the calls of the war needs has crippled us and has disrupted the regular routine and conduct of our affairs.

There are other questions that have troubled us which must be carefully considered and solved at the earliest possible moment. During the year we have had to borrow some money to meet our expenses and the importance of an endowment fund has never been more emphasized than now.

Some gifts have been received: Mrs. J. Hull Browning of Tenafly, New Jersey, has given a one thousand dollar Liberty Bond towards the endowment of her free bed, this being the second thousand she has given. I may say, however, that the gift was received too late to appear in the year's financial statement.

The donors of the M. Bed, who still desire to remain unknown, have also given a second thousand dollars towards their endowed bed. But the need for greater income is pressing and we must try to do our best to secure further endowment funds during the coming year. Demands on everyone

have been heavy during the years of war, and will continue so for some time, but if we are to bring, and keep, our Institution up to a high standard of efficiency and service we must make an effort to secure the backing of an income independent of hospital receipts.

May I ask that this be kept in mind by every member of the Corporation during the coming year with the view of each doing what he can to secure additional endowment funds.

Respectfully submitted,

LOUIS F. MONTEAGLE,
President.

REPORT OF THE EXECUTIVE COMMITTEE

*The President and Board of Directors
of St. Luke's Hospital,
San Francisco, Calif.*

GENTLEMEN: The past year has been one filled with perplexing problems. Of our regular Staff, six have gone into the Army and have been granted leave of absence during their term of service. Another member of the Staff was absent on leave for nearly five months, with the result that the percentage of the earnings of the Hospital through the Staff dropped from its maximum of thirty in 1918 to eighteen for the year just closed.

The death of Dr. Fayette Watt Birtch, for so many years Resident Physician, caused a vacancy that has not yet been filled, and his widespread influence cannot soon be replaced.

The ever-increasing cost of labor and supplies of every kind have added to the problems of the Superintendent and those associated with him in the House Staff, and their ceaseless efforts to make both ends meet deserve hearty recognition. The introduction of a food control system very materially reduced the cost of food supplies, which would have been more marked but for the continual rise in prices. The breaking out of the Spanish Influenza at a time when the President and other members of the Board were absent from the city, necessitated the authorization by the Chairman of this Committee for certain emergency expenses such as arranging wards in the Nurses' Home for the nurses taken down by the epidemic, and the employment of additional help, that in his judgement needed to be acted upon at once, though very materially adding to the total expenditures for the month. With the subsidence of the epidemic and the prospect of an early conclusion of the war, it is hoped that during this year the regular meetings of both this and the Conference Committee may be resumed and the work both of the Board of Directors and of the Staff may come back to normal conditions.

Respectfully submitted,

JOHN A. EMERY,
Chairman.

REPORT OF THE AUDITOR

San Francisco, Nov. 14, 1918.

*To the Board of Directors
of St. Luke's Hospital,
San Francisco, Calif.*

GENTLEMEN: In accordance with your valued instructions, I have audited the books and accounts both of your Treasurer and Superintendent. Annexed please find—

Exhibit A—Balance Sheet, as at September 30th, 1918;
 “ *B*—Income and Expenditure Account, showing operations at Hospital for Fiscal Year ending September 30th, 1918;
 “ *C*—Profit and Loss Account for the Fiscal Year ending September 30th, 1918.

Balance Sheet—Exhibit A.

The total assets amount to.....	\$732,373.70
The Liabilities are.....	70,136.22
Endowment Funds.....	\$49,883.55
Accounts Payable.....	16,252.67
Notes Payable.....	4,000.00
Leaving a surplus over all liabilities of	\$662,237.48
The par value of Bonds representing the Endowment Funds is.....	\$48,000.00
Surplus cash in Savings Bank.....	1,483.55
and Bond Guarantee Fund of.....	880.00
Total.....	\$50,363.55

This margin of security is greatly strengthened by the Sinking Fund investments of \$17,600 par value representing surplus.

Profit and Loss Account.

The balance of Surplus Account at the beginning of the year was.....	\$28,811.42
Add net profit for this year.....	834.68
	<hr/>
Makes the present total of.....	\$29,646.10

That the profit should drop from over \$18,000 in 1917 to less than \$1,000 in 1918 is a change which requires some analysis to understand it. I give you below the table showing the increases and decreases of operating earnings and expenses:

	1917	1918	Increase or Decrease
Gross Earnings.....	\$214,447.00	\$209,077.00	D \$5,370.00
Deduction for free work.....	13,752.00	14,198.00	I 446.00
	<hr/>	<hr/>	<hr/>
With a net income.....	\$200,695.00	\$194,879.00	D \$ 5,816.00
Operating Expenses.....	177,387.00	189,160.00	I 11,773.00
	<hr/>	<hr/>	<hr/>
Leaving an Operating Profit.....	\$23,308.00	\$5,719.00	D \$17,589.00

The decreased operating profit of \$17,589.00 is shown as one-third decreased earnings and two-thirds increased expenses.

You cannot take umbrage at a community for evidencing a tendency to better health because it decreases hospital earnings particularly as the decrease in your case is only 2.4%; but you may inquire why your expenses increased 6.7% at the same time. Comparison of the revenue accounts for the two years shows that the increased expenditure is principally in salaries, to some extent in supplies, augmented by \$2000 increase in repairs.

There is a substantial decrease, however, in the Steward's Department, showing the good results obtained from the expenditure of \$1400 for food control.

You have been prepared by the very careful analysis of the drug situation in last year's excellent report of your Superintendent. The increased cost of supplies is noticeable in nearly every case.

The income from invested funds was \$4296.00 as compared with \$2735.00 in 1917.

Investments.

The securities were verified by actual count at the Crocker Vaults on October 8th, when all bonds as enumerated on the balance sheet were found to be on hand. The Savings Bank balances and the current bank accounts have all been verified with the bank statements.

Accounts Receivable.

The balance shown as due from patients is \$19,196.70. Permit me to refer you to my last year's report upon this item. This is an item on the balance sheet to which I cannot certify. It is not supported by a trial balance of the individual patient's accounts as it should be. I am loath to repeat what I stated last year was the correct method of caring for this part of your accounts but my certification of the correctness of the balance sheet is qualified so far as this item is concerned.

Inventories.

The inventories have increased from \$3,241.00 in 1917 to \$6,311.00 on September 30th last. The detailed inventory signed by the storekeeper I have accepted as correct.

Sinking Fund.

In spite of a hard year, your Treasurer has increased the sinking fund investments by \$1,590.00 to a total of \$17,455.00. Of this amount, \$2,600 is invested in Liberty Bonds.

I take pleasure in reporting that the records at the Hospital and at the Treasurer's office are correct and all disbursements are supported by vouchers duly authorized by the Superintendent and Treasurer with detailed bills or payrolls attached.

FORTY-SEVENTH ANNUAL REPORT

27

In conclusion, I certify that the attached balance sheet of assets and liabilities and profit and loss account of revenue and expenditure, in my opinion, set forth the financial condition of this Corporation at September 30th, 1918, and the result of its operations for the past fiscal year.

Yours faithfully,

FREDERIC M. LEE.

REPORT OF THE CHAPLAIN

*Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: Your Chaplain begs to report as follows:

Services held in Chapel.....	139
Holy Communion celebrated.....	78
Evening Prayers said.....	61
Sacrament of Baptism administered.....	3
Private Communions given.....	294

During the year the following Clergymen and others addressed the Nurses:

The Right Reverend the Bishop.

The Venerable the Archdeacon.

The Very Reverend the Dean.

The Reverends H. Howitt, Perrin, MacFarlane, Wallace, Turner, Evans.

Messrs. H. Bolte, A. Sperry, M. Kronmiller.

The Chaplain has visited regularly on Wednesday and Sunday mornings and on Saturday afternoons and evenings.

Services were held Sunday evenings at 6.15 and Tuesday evenings at 7.15. Other services as requested.

The Guild of Saint Barnabas held its meetings on the first Tuesday of each month. There was a joint meeting with the Cathedral Branch. The Guild has set itself the task of acquiring a small bungalow in some nearby suburb. Toward this end we have several War Stamps. We hope some one will allow us the use of the necessary land.

Respectfully submitted,

J. HENRY OEHLOFF,

Priest-in-Charge.

Emergency Hospital.....	2
Polyclinic.....	2
Isolation Hospital.....	4

This year has seen our medical staff further diminished on account of war conditions. We wish to thank our staff and St. Luke's Hospital for their great assistance during the year. We trust now with the arrival of peace and the gradual restoration of normal conditions to be able to augment our staff and again build up our clinical work.

REPORT OF THE SUPERINTENDENT

*To the Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: Again it is my privilege to present to you the annual report as superintendent of this hospital and to review the work of the last year.

At the time of writing this report (November, 1918), the entire world is suffering from a pandemic of influenza which has most seriously affected this hospital and for this reason you will find this report short and possibly some things that should be mentioned may unintentionally be omitted. With this apology we will proceed to briefly review the work of the year.

The most noteworthy occurrences during this period have been the rearrangements and adjustments made necessary directly and indirectly due to the war. With a large number of Staff members, Internes and graduate nurses in Federal Service, we have frequently been hard pressed to know how to give to our patients the service that their cases demanded.

Another thing that very materially handicapped us was the passing away on June 13th of Dr. Birtch, our Resident Physician, who had been associated with the hospital as Interne and Resident Physician for over ten years, after an illness of several weeks.

The great work he had accomplished in establishing the St. Luke's Hospital Clinical Club and especially the Diagnostic Section of that Club has done much for medical science, especially in systematizing and organizing complete examination of cases.

FEDERAL SERVICE

Over forty percent of our visiting medical staff have entered Federal Service, throwing increased work on those remaining.

Among the nursing force, a large number have also entered Federal Service, but up to the present date we have been able to get excellent nurses for our executive heads. Special nurses for private cases are, however, very scarce and frequently almost impossible to obtain.

On the other hand, we have been extremely fortunate in having ample applications from women to enter the Training School. How long this will continue, however, with the opening of training schools in the cantonment hospitals is another question that time alone will answer.

Our service flag now has over sixty stars and is being added to all the time.

FINANCES

The past year has not been as successful a year from a financial standpoint as the year before, but we have been able to finish it with a cash profit of \$4,549.36, and when we add to that the cost of free work and discounts, which amounted to \$14,198.18, we have a real profit of \$18,747.54, which is 23% less than last year but about the same as the year before. Many factors have combined to cause this—the chief of which has been the increased cost of supplies. One item alone, fuel oil, has increased in cost over \$500.00 per month. On account of the many doctors who have joined the colors, the average number of patients has decreased so that last year we only averaged 112 patients per day while the year before we averaged 122.

Not only have supplies increased the cost of operation, but also the increased cost of labor has helped very materially. Today our pay roll is about \$1,500.00 per month higher than it was last year.

In order to partially meet these conditions, we have increased our room rates about 18%. If this had not been done, we would surely have faced a deficit at this time. How long the present rates can be maintained is of course a question.

One other thing has helped and that is that the amount of money collected during the year is less than \$500.00 less than the total to be collected. For this showing we must thank our cashier.

IMPROVEMENTS

With our finances as outlined above, many improvements that were being considered had to be indefinitely laid aside to be again considered after the termination of the war. This

refers to the remodeling of the Bancroft Building, the installation of a water softening system, etc.

We have, however, been able to make several improvements which were very necessary.

The X-Ray Department has been moved to commodious quarters adjoining the Hydrotherapeutic Department and new equipment has been added. This will give this department ample space for some time to come.

The Electrocardiograph has been installed in the old X-Ray quarters. Dr. Tupper, whom we expected to have charge of this service, is in Federal Service. Dr. Knapp is, however, studying the subject and expects soon to have the machine in operation.

The entire flooring in the porters' quarters has been relaid. The Nurses' Home has been entirely repainted and many other minor improvements have been made.

The policy, begun three years ago, of sending a representative to the meetings of the American Hospital Association, was continued and Miss V. Jennings, head operating room nurse, represented us this year and brought back with her much new and instructive information. We feel that the hospital will gain much by continuing this policy.

The Women's Board has continued throughout the year with helpful comment and suggestions and we wish to extend to them our thanks.

In closing, may I suggest that it is probable that this next year that we are entering will probably be one of many more changes and readjustments and if we finish the year in as good condition as we are at present we will feel well satisfied.

Respectfully submitted,

W.M. R. DORR,

Superintendent.

GENERAL STATISTICS

For the Year ending September 30th.

	1918	1917	1916	1915

REPORT OF THE PATHOLOGICAL DEPARTMENT

*To the Board of Directors,
St. Luke's Hospital,
San Francisco, Cal.*

GENTLEMEN: I have the honor to report the laboratory work for the fiscal year ending September 30, 1918, in the following summary form herewith appended.

During the last six months of the year there is a noticeable fall in the number of reports as shown in this table. This is undoubtedly due to the absence of physicians in the government service and other factors connected with the military situation.

The statistical report gives very little information concerning laboratory work which answers the questions frequently asked by visitors. One gets the impression from these questions that it is generally believed by those outside of medical circles that the laboratory is concerned principally with chemistry and physics. Since this yearly report will be largely circulated among non-medical readers, a brief mention of pathological work may be of interest in this place.

Pathology is broader than the work covered by the laboratory and may be said to be the foundation of all branches of medicine since it is concerned with the cause, development, progress and effect of disease. These questions, however, are the ones that particularly concern the laboratory. The instruments used in working out these laboratory problems are quite extensively those of chemistry and physics but probably not in the sense generally supposed.

Bacteria are generally known to be the frequent cause of disease. Part of the laboratory work is to identify bacteria in the blood, in suppurating wounds, in sputum, etc.; and while the means employed may be in a sense both chemical and physical, probably no more so than in the methods used in the art of cooking, where also a knowledge of chemistry is not out of place.

It happens that the progress and development of disease is often particularly shown by laboratory methods. Instance may be mentioned of tuberculous material sent to the laboratory from the operating room, where not only the nature of the disease but also the extent and progress may be determined by the use of the microscope and other methods in conjunction. Microscopic methods are physical in nature, but no more so than in telegraphy. A knowledge of physics in the use of the microscope is therefore not so essential as a knowledge of microscopic anatomy.

A small but essential part of laboratory work requires the use of animals. Positive diagnosis of tuberculosis of the kidneys sometimes requires this method. In order to overcome the quite common objection raised against such use of animals, a better understanding of the nature and object of this part of pathology is therefore to be desired. Just as it is understood that fur-bearing animals serve a necessary purpose in the health and comfort of humanity against cold in certain climates, it should also be known that laboratory animals serve a human life-saving purpose in sickness.

Another prevalent idea regarding hospital laboratories is that they are in a large sense experimental in character. This belief is erroneous in so far as most hospitals are concerned, because research requires time, money and special mental ability, all of which are seldom available, to any great extent, for this commendable work. The majority of laboratories are therefore confined mainly to routine as in most other fields of endeavor, the Pasteurs and Rockefeller Institutes being few and far apart.

Although great, productive minds and institutions are not numerous, the germ of research, invention, discovery, is in almost every one. A sort of hope or desire to accomplish something for human improvement and well-being seems almost instinctive. Perhaps the greater number of those with wealth have turned their means into such a purpose with purely this concern for human betterment in mind. Indeed the greater number of hospitals are built out of these thoughts

and circumstances. Can the ordinary worker do something more also to fulfill his own hope in a small way along this line of desire in life?

For the most part, individual work of this nature is probably quite limited, but there is thought to be a field of usefulness for pathology in preventive medicine not hitherto considered by laboratories of this type so far as we know. Dr. Dorr has suggested that this department possess the opportunity to begin experiment along this direction since expense need not at first be considered and time spent would not be great. Practically all the pathological material is lost to the public. Should this be entirely so? Since material is used to demonstrate diseased conditions to medical men, could not the same material, properly selected, serve the same purpose to others? It is believed, for instance, that tuberculosis could be so graphically illustrated by pathological specimens and explanatory charts that even the child or the uneducated would understand the nature of this prevalent disease and at the same time be made to realize how to guard against it. Such a public laboratory museum would have then a wider usefulness than the ones seen only by physicians. It would tend to counteract the growth of cults founded on beliefs not justifiable by the painful facts as medical men see them. It might well be then, that this phase of pathology possesses definite educational possibilities; one more advantage in the struggle against ignorance and sickness and the train of civic evils that follow them. We intend to begin at once this interesting, and it seems promising, experiment which Dr. Dorr has suggested.

In summary, it may be said that the laboratory has a growing usefulness in a limited field of pathology and as far as most laboratories are concerned this field is of a directly practicable nature rather than experimental. Further thought and energy would probably show, however, that this department has greater possibilities with the means at hand than have been developed up to the present time. Improvement has been suggested and will be acted upon.

In closing, we wish to express appreciation also for the continued spirit of good will and cooperation shown us by all departments and by individuals during these trying times.

Respectfully submitted,

E. V. KNAPP, M. D.

Pathologist

REPORT OF THE ROENTGENOLOGIST

*To the Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: There has been a satisfactory increase in the work, especially in the number of treatments. We attribute this increase to the advantages of the new and larger quarters which, when completely furnished, will be one of the most attractive X-Ray departments in the city.

Signed,

W. H. HILL,

Associate Roentgenologist.

REPORT OF THE WOMEN'S BOARD

*To the Board of Directors,
St. Luke's Hospital,
San Francisco, Cal.*

GENTLEMEN: During the year the hospital has been visited weekly by some member of the Board. In many instances it has been possible to make a few helpful suggestions and to add a personal touch that means so much in an institution. On St. Luke's Day the Board furnished the refreshments and served tea—a very gratifying number visited the hospital on that day. Thanksgiving, Christmas and Easter, the usual cards were placed on the patient's trays. At Christmas, garlands and wreaths were supplied and a tree provided for the nurses. On Easter a new flag and the decorations for the Chapel were given by one of the Board. Another member furnished the flowers for the Nurses' Graduation Exercises and the Board gave a stole to the Chapel in the name of the graduating class. Mrs. Sherman most enjoyably entertained this same class for tea at her own home. Many of our members have remembered the nurses at different times by sending tickets for concerts, theaters, etc. Mrs. Beaver very generously donated two dozen aluminum trays which were most acceptable.

Mrs. Chapman's death has been a great loss, she was one of our most interested and active workers and her stimulating personality is greatly missed.

Mrs. Frederick Moody was elected a member of our Board at the May meeting.

The first of the year the Library was recatalogued, the worn books discarded and many new ones added. Miss Taylor has given it her faithful care, covering the used books every week. Magazines have also been regularly placed in the Solariums for the benefit of the patients.

Respectfully submitted,

V. NEWELL DRONW,

Secretary.

REPORT OF ST. LUKE'S HOSPITAL CLINICAL CLUB

*To the Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: Despite the fact that many of the most active members of St. Luke's Hospital Clinical Club have been commissioned in the Medical Corps of the Army and Navy, the Friday meetings are fairly well attended. The recent epidemic of influenza necessitated a discontinuance for the past few weeks, but it is our intention to resume activities immediately, when the same method of study will be followed, that is, presentation of complete case reports obtained from the Diagnostic Section. In addition to this method it would seem to be of increased educational value to obtain material from interesting cases presented by the members of the medical profession engaged in general practice.

The Club extends to all members of the profession its cordial invitation to attend these meetings. The meetings being held on Fridays between the hours of 4.30 and 6 P.M.

Signed,

HARRY PARTRIDGE, M.D.,

Secretary.

EDWARD P. DRISCOLL, M.D.,

President.

**REPORT OF THE DIAGNOSTIC SECTION OF
ST. LUKE'S HOSPITAL CLINICAL CLUB**

*Board of Directors,
St. Luke's Hospital,
San Francisco, Cal.*

GENTLEMEN: We have the honor to report the work and interests of the Diagnostic Section for the year ending September 30, 1918, as follows:

During this period, 243 patients were examined. These patients were all referred to the Section by physicians throughout this state and from Nevada. The total number of physicians who have sent patients to us for examinations is 183. The total number of patients examined since the beginning of the organization is now 776. Many written and verbal statements have been received from both physicians and patients in praise of our work. Although special effort has been made to get frank criticism concerning all phases of our activities, no adverse ones have been received. We wish to express thanks, however, for numerous helpful suggestions.

The following list of publications of medical articles, mostly relative to Diagnostic work, have appeared during the year:

Birth, F. W.

Preoperative Investigation by Group Study Suggested as a Method for the Lowering of Surgical Fatalities.
Cal. St. Jour. of Med., April, 1918.

Hill, W. H.

The Analysis of the Cases in 400 Dyspeptic Patients especially from a Roentgenologic Standpoint. Amer. Jour. of Roentgenology, Dec., 1918.

Read, J. Marion.

Lymphocytosis: A Clinical Study from Group Diagnosis.
The Boston Med. and Surg. Jour., Nov. 15, 1917.

Ochsner, R. L.

The Relative Value of Five Diagnostic Procedures in 400 Consecutive Cases Investigated by Group Study Methods for Pulmonary Tuberculosis. Medicine and Surgery, Nov., 1917.

Knapp, E. V. ~~WASSERMANN AND THE FIFTH NERVE~~
Wassermann Reaction in 400 Cases Investigated by
Group Study Methods. Amer. Jour. of Syphilis, Oct.,
1917.

The following articles appeared too late to be entered in
the records for 1917.

Inman, T. G.

Some Considerations in Fifth Nerve Pathology.

McChesney, G. J.

Chronic Infectious Arthritis.

Read, J. Marion.

Some Pathologic Conditions of the Alimentary Tract
Associated with and Apparently Dependent upon Pyor-
rhea Alveolaris. Jour. of the Cal. State Dental Assn.,
June, 1917.

Reprints of these articles have been sent to members of the
profession in the states of California and Nevada.

On June 14th, Dr. F. W. Birtch died after an illness of sev-
eral weeks. His absence is specially felt by the Diagnostic
Section and will always be remembered with keen sorrow by
each and every one. His was the guiding spirit of this organ-
ization and its upbuilding was in a great measure due to his
energy and effort. His ability as a surgeon was of a high
order, already recognized beyond our immediate circle. It is
felt that his place can never be refilled in the full sense of his
worth. It is doubtful whether any other individual can
readily be named equal to his capacity for real work in fur-
thering the best interests of this organization.

Some of the regular members of the Diagnostic Section are
absent in Government Service, viz.—Drs. Inman, McChesney,
Tupper, Foster and Ruggles. Their places have been tempo-
rarily filled by Dr. Hund in the Cardiovascular Department;
Drs. Watkins and Stoddard in Orthopedics; Dr. Harvey in
Neurology; Dr. Foster's work in Bacteriology has been carried
on by the Pathological Department; Dr. Ruggles' associate,
Dr. Hill, has carried on the Roentgenological work; Dr.

Birch's place in Surgery Dr. Sullivan has kindly consented to fill temporarily; Dr. Ochsner has taken over the thankless task of Directorship, pending the return of members from government commissions; Dr. MacDonald, associate in the Genito-urinary Department, has charge of the Diagnostic work in reference to Gynecology which was formerly taken care of by Dr. Birch under General Surgery. Just before Dr. Birch's death, Dermatology was provided for under the direction of Dr. Stone.

No change has been made relative to policy toward the medical profession. Cases only are examined which have been referred to us by physicians. After examination in the hospital (usually requiring about four days) the patient is returned to his or her physician, followed by a detailed typewritten report together with recommendations for treatment. Our effort is to carefully correlate this report from every department represented on the Section. These departments are at the end of the year as follows: Pathology, X-Ray, Bacteriology, Gastro-intestinal, Respiratory, Cardiovascular, Genito-urinary, Gynecology, Neurology, Orthopedics, and General Medicine.

A carefully taken history in each case has proven to be of the highest importance in our work. It has been shown that this preliminary precaution leads almost directly to a correct diagnosis of the principal complaint in a high percentage of cases. This work has been very efficiently carried on by Miss E. Carmean, R.N. More than that, the diplomacy and watchful consideration for the wants of the patient which have been her constant interest are matters of no small importance. We do not hesitate to recommend to the consideration of other hospitals this solution of the history problem where the dearth of well trained internes is a source of difficulty.

Mrs. Bullock, with Mrs. Purcell assisting, has charge of the stenographic work in compiling the typewritten records and reports. Without this efficient type of service it would be impossible to carry on our work. We are of the opinion that lack of such assistance has much to do with the deplorable state of medical records so often encountered in hospitals.

The organization of the Diagnostic Section was the outgrowth, in a large measure, of unsatisfactory results experienced in the care of a certain class of patients—results which more complete investigation might have avoided. We refer particularly to those patients who are chronically ill. They are the constant concern of every physician. Many have gone from one physician to another seeking relief. Some, still in hope, have taken up Christian Science and other cults. Often these patients not only seek relief but also expect a correct explanation of the causes of their ill health; and there are numerous instances where they have found neither explanation nor relief. The group study method was therefore an effort to meet this demand and careful investigation of each patient is the real object of group study.

In the medical world the stage has long been set for this type of work. The means are already at hand. Certain factors at our disposal seem almost too obvious to mention if it were not that opportunity at hand is often neglected or indifferently seized upon. Hospitals of the type of St. Luke's have sprung into existence in large numbers throughout the country. Their influence is being recognized by a continually growing number of the community. They are already considered a necessity in many problems of public health. The advantages of the X-Ray and Pathological laboratories are well known. Moreover, these departments illustrate the tendency toward specialization in the organization of modern hospitals. They represent, however, only a small part of specialization in medicine, all other departments now being chiefly in the hands of specially trained medical men. This drift of medical men into channels of particular purpose seems only natural and due to the rapid expansion of the medical sciences, which is now too large to be applied by any one attempting complete investigation of obscure disease conditions. But, while hospitals and special training are necessary factors in medical work, there is objection to the division of labor which tends at the same time to limit the vision and knowledge of any one. It seems to us that the hospital should furnish the best medium through which to overcome the disadvan-

tages of special training and at the same time to preserve its benefits by furnishing to their specially trained men the atmosphere of continual contact with all departments of medicine. We know of no way whereby these factors may be taken into account as effectually as by the method of group study. By this plan each patient is studied under hospital conditions. Each examiner may do only the work of his own department but all departments may be represented. Consultation is carried on each day with all members present. The work of each member is thus continually before all the others in open discussion, the better to be judged in its true worth and rightly placed according to the ability of the team, rather than to the weakness of one individual.

The elements of time and expense are of great importance to every patient. By the Diagnostic Method it is possible to make a more complete investigation in less time and under less expense than is otherwise usual. Very many are familiar with the necessary expense and other unsatisfactory features frequently endured in going from one specialist to another in down town offices and waiting for their reports which cannot be very easily grouped or correlated in the order of their proper importance because the different specialists do not under these conditions usually have an opportunity to meet to settle all possible phases which may arise. Nevertheless, there is no doubt that the general practitioner should have available for his use, at least expense and loss of time, not only the Laboratory and X-Ray departments but the larger laboratory, namely, all the other means which specialists can furnish him in his general work in order to arrive with the least chance of error at the actual causes of disease and in order to more thoroughly study the progress and results of disease. For, if such methods are not available at reasonable expense to the individual patient, the great majority of people will be more or less seriously handicapped in the matter of proper care.

Unfortunately, however, this work cannot be successfully undertaken without much sacrifice of time by the physician and without his continual careful consideration and this, to a great extent, without the expectation of fair financial remu-

neration. On the other hand, there is no question that much medical time and thought and care are due every patient.

All of the members of the Section have been impressed by the advanced stages of disease frequently noted in our investigations. It seems more evident to us than was formerly realized that successful therapy must be applied at an earlier date in many instances. In other words, preventive medicine seems to us a form of therapy full of promise. When individuals wisely care for their physical well-being, as they care for their automobiles, much unnecessary suffering will be avoided in later years.

We wish to add in summary that the interests which most concern the Diagnostic Section are questions relative to more thorough methods of studying disease, preliminary to treatment; how best to use the extensive hospital equipment now provided at great expense; how best to utilize the work of specially trained medical men who are concerned in the application of these hospital facilities; also questions concerning the loss of time and money due to sickness. In our opinion these interests are in general those which should interest the whole public—economic questions now coming into politics. Without careful consideration and guarded action they would seem sure to lead to unwise legislation in matters of public health.

Respectfully submitted,

DIAGNOSTIC SECTION.

REPORT OF THE SUPERINTENDENT OF NURSES

*To the Board of Directors,
St. Luke's Hospital.*

GENTLEMEN: I take pleasure in submitting to you the following report of the School of Nursing for the past year.

The number of students in the School is as follows:

Seniors, 1919	22
Intermediates, 1920.....	26
Juniors, 1921 Spring Term.....	14
Probationers, 1921 Fall Term.....	30
 Total,	 92

The number of applicants were unusually large prior to September 1st, since then, whether due to Sacramento raising the standard or to less enthusiasm to enter this service, applications have greatly diminished.

Quite a number of the recent graduates of 1916 and 1917 have seen a great deal of war work in Europe. Four of our navy detachments have been sent to Guam, one to the Philippines, several to France and Scotland. We regret to have to report the deaths of Miss Turner, Actual Service, Mare Island, and Miss Mackintosh, Actual Service, Camp Eustace, West Virginia.

Miss Brown left Letterman Hospital for Denver where she is to begin a Government Training School. We are proud to give her up to the Government but hope she may be released soon and able to resume her position again as Superintendent of Nurses.

The Commencement Exercises of the Class of 1918 were held April 11th, 1918.

Chapel Service for School at 2.30 P. M.

On the Tennis Court at 3 P. M.

Overture by the Orchestra.

Invocation by Rt. Rev. Wm. Ford Nichols, Bishop of Calif.

Address by Rt. Rev. Wm. Ford Nichols, Bishop of California.
Selection by the Orchestra.

Presentation of Diplomas by Mr. Louis F. Monteagle,
President of the Hospital.

Benediction by Archdeacon Emery.

From 4 to 5 P. M., reception in the Nurses' Home.

At 8.30 P. M., the usual dance.

The Staff and Students wish again to express their appreciation of the continued co-operation of the Women's Board.

We gratefully acknowledge our indebtedness to the House Staff and the Staff of Lecturers who have given their valuable time to the instruction of the Nurses, to the Members of your Board, and to all co-workers for their loyal support.

Respectfully submitted,

L. M. THOM,

Acting Superintendent.

SCHOOL OF NURSING

REQUIREMENTS FOR ADMISSION

1. A complete high school education or its equivalent in a recognized school.
2. Home training and influences fitted to form good moral character and to lay the foundation for the future work of the nurse.
3. Good physical condition. Candidates are preferred between twenty and thirty years of age, of strong physique and not under average weight and height.

GENERAL INFORMATION

The work of nursing demands intelligence, good temper, an orderly habit of mind, thorough trustworthiness, and a willing spirit. No one should enter upon this work except with a strong sense of duty and a readiness to conform to the necessarily strict rules of discipline. The Superintendent of the Hospital and the Superintendent of the Training School decide as to the acceptance of candidates for the preliminary term. A limited number only can be received. The declination, therefore, of a candidate is no reflection on the individual's character. The reasons for declination are not given either to applicants for admission nor to probationers on duty.

Candidates should be vaccinated within the year previous to their coming to the Hospital. Their teeth should also be in good condition.

UNDERGRADUATE STUDENTS

Candidates, if accepted, are admitted twice a year and serve for a probationary period of six months; if satisfactory at the end of that time, they will sign an agreement to remain in the school for three years, and to conform to its rules and regulations. The right is reserved by the Hospital authorities to dismiss a pupil at any time for inefficiency, misconduct, neglect of duty, failure to pass examination, inability to develop qualities fitting the profession she desires to enter, or for any other reason that may seem to them adequate.

VACATION

As the weekly service at the present time is forty-eight hours the vacation may not be more than a week a year.

SICKNESS

All students are cared for gratuitously when ill and receive the professional services of the physician of the school. Time lost through illness or for any other reason must be made up.

EXAMINATIONS

Examinations, written and oral, are held at stated periods, those upon special courses being conducted by the instructors at the close of each course. They are both written and oral, and include practical tests. The standing of the pupil is based upon the general character of work throughout the year as well as the results of examinations.

GRADUATION

The diploma of the school is awarded to those who have completed satisfactorily the full term of three years, and have passed the final examinations. Nurses are then entitled to examination for registration in this State.

As St. Luke's Hospital is an institution under the auspices of the Episcopal Church, the management requires from the nurses that neither by word nor act shall any nurse assume any position or express any opinion antagonistic to the Church and its teachings. When their duties will permit, all nurses are expected to attend the services in the Chapel, unless excused by the Superintendent of Nurses.

THE COURSE OF INSTRUCTION

The course of instruction is that arranged by the State Board of Health for accredited training schools. It covers a period of three years and includes practical demonstrations classes and lectures in the following:

First Year

Physics and Chemistry	Ethics
Anatomy and Physiology	History of Nursing
Hygiene	Bacteriology
Nutrition and Cooking	Materia Medica
Nursing Procedures	Bandaging

Second Year

Medical Nursing	Examination of Urine
Materia Medica	Laboratory Technic
Therapeutics	Nursing Procedures
Nursing in Communicable Diseases	Hydrotherapy
Dietetics	Orthopedic Nursing
Operating Room Technic	Massage

Third Year

Obstetrics	Hygiene and Preventive
Gynecology	Medicine
Pediatrics	Nursing in Mental Diseases
Infant Feeding	Special Lectures on Subjects
Nursing in Diseases of Eye, Ear, Nose and Throat	allied to Nursing
	Social Service
	Electives

Any further information desired may be obtained by applying to the Superintendent of Nurses, St. Luke's Hospital, San Francisco, California.

LIST OF GRADUATES OF THE TRAINING SCHOOL

(Any additional information for this list will be gladly received. Address communications to Miss Emma Isaacs, Secretary of Alumni Association, care of St. Luke's Hospital.)

*Denotes members of the Alumni Association.

†Means married but married name unknown. ‡Means dead.

¶Denotes that they have signed up for Federal Service.

1890

Minnie Hastings, Mrs. McGlee, Spokane, Wash.

1891

Annie B. Burk,	Mrs. Gardner,	Oakland, Cal.

FORM OF BEQUEST

To those who may feel disposed to donate by Will to St. Luke's Hospital, the following is submitted as a form:

FORM OF BEQUEST OF PERSONAL PROPERTY

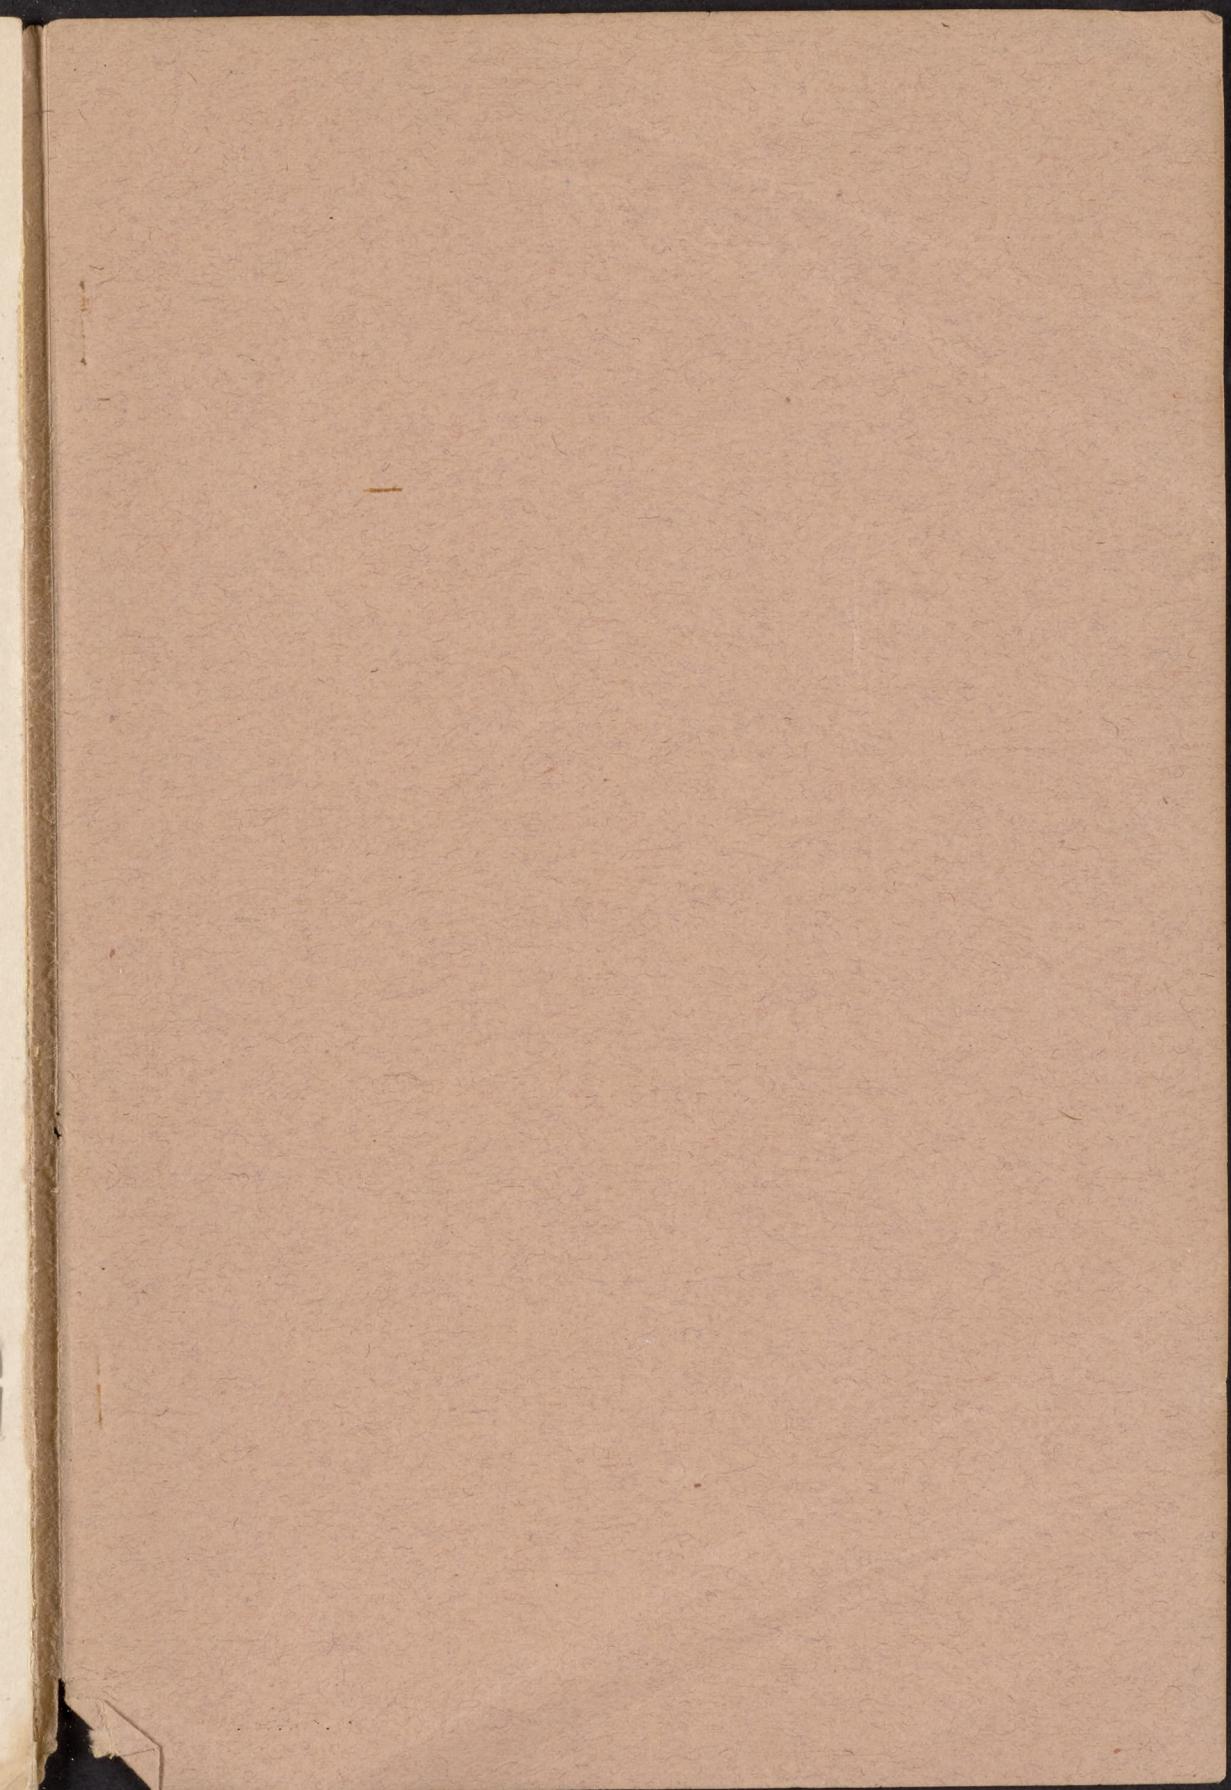

I give and bequeath unto "St. Luke's Hospital," a corporation existing under the laws of the State of California, the sum of..... Dollars, to be applied to the use of said corporation.

FORM OF DEVISE OF REAL ESTATE

I give and bequeath unto "St. Luke's Hospital," a corporation existing under the laws of the State of California, for its corporate purposes, all (here insert description of property).

Together with all the appurtenances, tenements, and hereditaments thereunto belonging or in any wise appertaining. To have and to hold the same unto the said corporation, its successors and assigns forever.

Section 1313 of the Civil Code of this State provides that "No estate, real or personal, shall be bequeathed or devised to any charitable or benevolent society or corporation, or to any person or persons in trust for charitable uses, except the same be done by will duly executed at least thirty days before the decease of the testator; and if so made at least thirty days prior to such death, such devise and legacy, and each of them, shall be valid; *provided*, that no such devises or bequests shall collectively exceed one-third of the estate of the testator leaving legal heirs, and in such case a pro rata deduction from such devises or bequests shall be made, so as to reduce the aggregate thereof to one-third of such estate; and all disposition of property made contrary hereto shall be void, and go to the residuary legatee or devisee, next of kin, or heirs according to law."

THE HICKS-JUDD CO., S. F.
